Space & Naval Warfare Systems Command Awards Shipboard Integrated Afloat LAN Delivery Order

SAN DIEGO – Electronic Data Systems of Herndon, Va., is being awarded a delivery order with a firm, fixed price level of effort for the shipboard integrated local area networks and integration services on-board Navy ships. Electronic Data Systems will provide services and products to integrate Navy systems such as Global Command, Control System - Maritime (GCCS-M), Naval Tactical Command Support System (NTCSS), and Advanced Digital Network System (ADNS) into integrated shipboard local area networks (LANs) using IT 21 standards and architecture in support of the Naval Integrated Networks Program. Eleven bids were solicited and seven received from businesses holding existing contracts and Blanket Purchase Agreements with the Navy. After an initial down select to five firms, Electronic Data Systems offered the solution evaluated as the best value for the Navy. Work on this delivery order will be performed primarily in Norfolk and San Diego with some locations worldwide under the Indefinite Delivery, Indefinite Quantity PC-LAN+ contract awarded in 1995 to Electronic Data Systems. The maximum value of that contract if all options are exercised is \$575 Million. This is a one-year delivery order with \$462, 227 being obligated today. FY99 OPN funding will be used. Funds expire September 30, 2001. The Space & Naval Warfare Systems Command San Diego is the contracting activity (N68939-95-D-0018).
